.

Will NMC batteries drive demand for energy storage?

The rapid shift towards green energy from traditional energy system is likely to further drive demand for NMC batteries for energy storage in these grids. For instance, according to the US IEA the global renewable capacity is estimated to grow more than 5500GW during 2024-2030 period.

How much will a battery cost in 2026/27?

That trend is expected to continue. In 2026/27, the average pack price is expected to fall below \$100/kWh, based on raw material costs, competition, and pressure from alternative technology such as Na-ion batteries, which could be 30% cheaper than LFP devices when production of the former is scaled up.

Which battery chemistry is favored by NMC vs LFP?

Owing to the improved heat stability and longer life cycle of batteries NMC

batteries are favored significantly. Nickel provides higher performance of batteries but are costlier when compared to LFP. Thus, companies or researchers are developing new chemistries to target cost-sensitive users. For instance, nickel zinc (NiZn) battery chemistry.
