

National development and reform commission strengthens power grid peak regulation and energy storage

Overview

The guideline, jointly released by four authorities including the NDRC and the National Energy Administration, aims to give full play to NEVs' important role in electrochemical energy storage system, consolidate and expand NEVs development advantages, and support the construction of new energy system and new power system. Can new energy vehicles be integrated with the power grid?

BEIJING, Jan. 4 -- China has released an implementation guideline on strengthening the integration of new energy vehicles (NEVs) with the power grid, according to the National Development and Reform Commission (NDRC).

How will a public sector charging system be improved?

Priority will be given to bidirectional charging for public sector vehicles such as government vehicles, rental vehicles, and public transportation vehicles. Enhance charging and swapping facilities: Intelligent charging facilities will be promoted and existing charging piles will be gradually upgraded.

How will V2G be integrated into electricity demand management?

Strengthen support for and assurance capabilities of grid companies: V2G will be integrated into electricity demand management, and electricity grid operators will be supported in V2G management with new load systems. Besides, grid connection and metering for V2G shall be improved, and grid clearing for V2G merchants shall be optimised.

How can Nev owners benefit from energy storage?

NEV owners can also economically benefit by selling stored electricity back to the grid through charging stations, and the scale of China's electric vehicle fleet may reach several hundred million in the next decade, amplifying the energy storage value. [Read more.](#)

Who is affected by the new power market rules?

The revised rules now encompass a broader range of market participants, including power market operators, grid companies, provincial-level power trading centers, power sales firms, energy storage companies and virtual power plants, with the goal to ensure competition and orderliness in the market.
