

National development energy storage provident fund

Overview

How can the government support research and development in energy storage technologies?

To address the need for long-term research and development in energy storage technologies, collaboration between academia and industry will be necessary. The government may establish a Nodal Agency to coordinate R&D efforts in the field, and funding will be provided through this agency.

Are independent energy storage stations a good investment?

This does not augur well for the market in terms of long-term competition. There will be safety risks associated with excessive cost control and an indifference to quality. Independent energy storage stations enjoy good long-term prospects, though this segment is sluggish in the short term.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

How does budget support enabling infrastructure for pumped storage projects?

Budgetary support for enabling infrastructure for Pumped Storage Projects
Pumped Storage Projects are often taken up in remote areas which have infrastructure deficits. The infrastructure created for these projects enables further development of the area as the same is available for reuse for other purposes.

Why is investor participation important in the energy storage industry?

Investor participation is beneficial for the development of the energy storage

industry. Facing trends, they should keep a cool head in assessing business models to identify high-quality segments and targets.

Why should we invest in energy storage?

By providing low-cost funding for breakthrough storage solutions, we help bring clean electricity to millions of people when they need it. The rapid expansion in intermittent sources of clean energy such as wind and solar power must be matched by investments in energy storage to ensure communities get electricity when they need it most.
