

# Nepal energy storage

## Overview

---

Two large storage projects under discussion in Nepal are the 1,200 MW Budhi Gandaki Storage Hydropower Project with capacity of generating 3,383 GWh of energy annually, and the 670 MW Dudhkoshi Storage Hydropower Project that could generate 3,442 GWh of energy each year. When will Nepal's largest energy storage project be completed?

The project said the overall construction is set to be completed by May 2026. The project will be one of Nepal's biggest storage-type projects, with an estimated annual energy generation capacity of 587.7 GWh for the first 10 years and 489.9 GWh from the 11th year. During the dry season, the project can generate energy for six hours daily.

How many storage projects are there in Nepal?

Nepal has only two storage projects—Kulekhani I (60 MW) and Kulekhani II (32 MW). The project, which will be Nepal's third storage type, is 150 km west of Kathmandu on the Seti river near Damauli in the Tanahun district. Shyamji Bhandari, project chief, said grouting is being done in the lower level area of the main dam under package 1.

Can pumped storage hydropower be used in Nepal?

In this study, we assess the potential of pumped storage hydropower across Nepal, a central Himalayan country, under multiple configurations by pairing lakes, rivers, and available flat terrains. We then identify technically feasible pairs from those of potential locations.

Can a geospatial model predict energy storage capacity across the Nepal Himalayas?

In this study, we configured a geospatial model to identify the potential of PSH across the Nepal Himalayas under multiple configurations by pairing lakes, hydropower projects, rivers, and available flat terrain, and consequently estimate the energy storage capacity.

Why should we study pumped storage systems in Nepal Himalayas?

Nepal Himalayas provide an ideal testbed to study pumped storage systems given high topographic gradients, large flow fluctuations, and prevalent energy demand patterns.

Where are the most exploitable storage sites in Nepal?

We observed that the most technically feasible locations (greater than 0.1 GWh, shown in green squares in Fig. 4) were located in the northeast region of the country. Only one exploitable site was found with a larger storage capacity, i.e., 0.3 GWh (between Begnas and Rupa Lakes in Northeast Nepal).
