

New energy storage box polishing

Overview

In the production process of battery trays and energy storage liquid cold boxes for new energy vehicles, necessary and appropriate surface treatment is a key step, such as: using coating, oxidation treatment, etc. to form a protective layer on the metal surface to resist the erosion of corrosive media; Components that require electrical isolation, such as battery cells, water-cooling plates, module walls, etc., need to establish an insulating protective film.

New energy storage box polishing

New energy industry

Customers in the new energy industry use KS robotic polishing equipment to complete the grinding and polishing of various new energy products. Such as metal parts in electric vehicles ...

New energy storage box factory

The production base for new energy storage containers is an important support for renewable energy, providing a solid foundation for the development of the new energy industry. MIC ...
