## Overview

---

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.

Why is energy storage important?

Energy storage is a potential substitute for, or complement to, almost every aspect of a power system, including generation, transmission, and demand flexibility. Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible.

Are battery energy storage systems reliable?

The Australian Energy Market Operator (AEMO) has found battery energy storage systems (BESS) are the most reliable clean energy technology in the National Electricity Market (NEM). If playback doesn't begin shortly, try restarting your device. An error occurred while retrieving sharing information. Please try again later.

Are graphene-based batteries a breakthrough energy storage technology?

Graphene-based batteries are emerging as a groundbreaking energy storage technology due to their unique material properties. Graphene, a single layer of

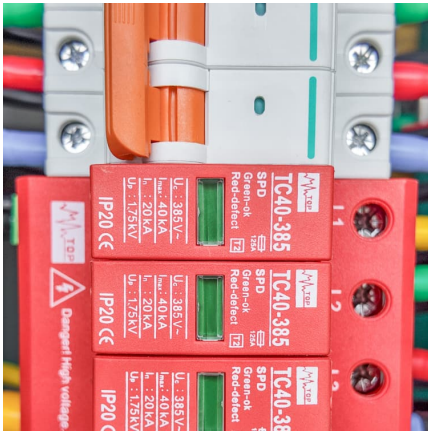

carbon atoms arranged in a two-dimensional honeycomb lattice, has exceptional electrical conductivity, high mechanical strength, and superior thermal properties.

Was 2024 a good year for energy storage?

For a good overview of the energy storage situation at the end of last year, focused on batteries collected to act at grid scales, read “ 2024 was a fantastic year for energy storage ” (Julian Spector, Canary Media).
