

# **New Mexico battery energy storage system development**

## Overview

---

Is battery energy storage a key component of New Mexico's energy plan?

PNM, the largest utility in New Mexico, has identified battery energy storage as a key component in its plan to make its electric generation 100% carbon-free by 2040, five years ahead of the state's goal.

What are California's new battery energy storage projects?

The Gateway and Moss Landing projects are just two of the battery energy storage installations being developed across California, a state that has ramped up its use of renewable energy in recent years while phasing out electricity from coal, nuclear, and natural gas-fired power plants.

When will Corazon energy storage open in New Mexico?

PNM filed with the New Mexico Public Regulation Commission for approval of the project on Nov. 22, 2024. If approved, Corazon Energy Storage, located in Albuquerque, will begin construction in 2026, with an anticipated commercial operation date in late 2027.

How did PNM get its energy project approved?

The project was procured via the utility's 2026-2028 Generation Resources Request for Proposals, which was issued in 2022 in a bid to meet growing energy demand in New Mexico as it transitions to zero-carbon energy by 2045. PNM filed with the New Mexico Public Regulation Commission for approval of the project on Nov. 22, 2024.
