

Ouagadougou energy storage liquid cooling plate

Overview

What is a liquid cooling unit?

The product installs a liquid-cooling unit for thermal management of energy storage battery system. It effectively dissipates excess heat in high-temperature environments while in low temperatures, it preheats the equipment. Such measures ensure that the equipment within the cabin maintains its lifespan.

What are the objectives of a liquid based cold plate?

Objective functions and constraints For a liquid-based cold plate, the primary goal is to maximize the heat transfer rate and minimize the flow resistance through optimizing the channel structure. In addition, thermal uniformity is another key factor, which cannot be neglected for battery thermal management.

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.

What is the difference between indirect contact and liquid-based cooling plate?

In contrast, indirect contact, which separates coolant from battery using cold plates or tubes, has become mainstream in real applications . Nevertheless, the superiority of hydrothermal performance of liquid-based cooling plate is highly dependent on the flow parameters and topology.

What is a liquid cooling system?

This project's liquid cooling system consists of primary, secondary, and

tertiary pipelines, constructed by using factory prefabrication and on-site assembly within the cabin. The primary liquid cooling pipes utilize 304 stainless steel, whereas the secondary and tertiary pipes are made from PA12 nylon tubing.

How long is a 5MWh liquid-cooling energy storage cabin?

The layout project for the 5MWh liquid-cooling energy storage cabin is shown in Figure 1. The cabin length follows a non-standard 20'GP design (6684mm length × 2634mm width × 3008mm height). Inside, there are 12 battery clusters arranged back-to-back, each with an access door for equipment entry, installation, debugging, and maintenance.
