

# Penalties on overseas energy storage project employees

## Overview

---

Our focus here is on H.R. 1's extension and expansion of pre-existing foreign entity of concern (FEOC) restrictions for each of the tax credits most likely be relevant to large-scale energy storage projects under Sections 45Y, 48E, and 45X of the Internal Revenue Code.

Our focus here is on H.R. 1's extension and expansion of pre-existing foreign entity of concern (FEOC) restrictions for each of the tax credits most likely be relevant to large-scale energy storage projects under Sections 45Y, 48E, and 45X of the Internal Revenue Code.

The prohibition on ownership by Prohibited Foreign Entities will require taxpayers to seek more expansive disclosure of the ownership structure of foreign suppliers, including the entities that hold the debt of such suppliers. Relatedly, the prohibition on "effective control" by Prohibited Foreign.

The One Big, Beautiful Bill Act includes new restrictions on technology-neutral tax credits, including project-based tax credits and the "45X" manufacturing tax credit which can be claimed by energy storage industry manufacturers and developers. The law seeks to limit content from foreign entities.

They are 55% for such projects that start construction in 2026, increasing over time to 75% for storage projects starting construction after 2029. "There are significant penalties for getting the material assistance calculations wrong," said Martin. A 20% penalty will be imposed on any taxpayer.

Makes payments to more than one PFE, in aggregate of 15 percent. For this rule taxpayer need only consider payments related to the production of electricity (45Y/48E) or the production of eligible components (45X). Payments = payment of dividends, interest, compensation for services, rentals or.

Applicants that seek to include Foreign Entity participation or foreign work in a U.S. Department of Energy (DOE) Office of Clean Energy Demonstrations (OCED) funded project are required to submit a waiver request for all foreign entity participation (FEP) and proposed foreign work (FW) on OCED.

The proposed legislation would allow the IRS to impose a 20% penalty for substantial understatement of tax liability when there is a disallowance of energy credits due to an overstated Material Assistance Cost Ratio, if the disallowance creates an understatement of tax equal to 1% of the tax that. Are feoc restrictions relevant to large-scale energy storage projects?

Our focus here is on H.R. 1's extension and expansion of pre-existing foreign entity of concern (FEOC) restrictions for each of the tax credits most likely be relevant to large-scale energy storage projects under Sections 45Y, 48E, and 45X of the Internal Revenue Code.

How will HR 1 affect energy storage projects?

H.R. 1 significantly rolls back or repeals many of the clean energy tax credits and incentives introduced with the Inflation Reduction Act of 2022, but energy storage projects are generally not as severely impacted as wind and solar, as energy storage projects beginning construction before 2033 remain eligible for key credits.

Will feoc rules increase IRS enforcement risks relating to energy credits?

These FEOC rules would create an environment in which there are increased IRS enforcement risks relating to energy credits. The Senate Bill text institutes a more punishing IRS enforcement regime for credits disallowed due to FEOC issues than for many other tax issues. For instance, the Senate Bill would establish an extended FEOC audit period.

What is a standalone energy storage project?

Standalone energy storage projects are increasingly utility-scale installations. For example, a battery array can provide a range of services, including ancillary services, to the system operator or network owner. This type of project allows for the deferral of network reinforcement works or islanded networks.

How do leasehold-type land rights affect a storage project?

For leasehold-type land rights, the rental arrangements may influence the usage of the storage project. Some landlords may also require technology-specific protections to be included in the documentation, for example in relation to contaminated land issues.

Who can benefit from energy storage?

Energy storage offers a range of opportunities for standalone developers, generators, network operators and consumers (ranging from large energy users through to domestic consumers) and other electricity sector participants. Storage is an increasing focus due to the range of benefits the various technologies can provide.
