

Polymer energy storage capacitor manufacturer phone number

Overview

What is a polymer capacitor?

A polymer capacitor is an electrolytic capacitor (e-cap) that uses a solid electrolyte of a conductive polymer like the electrolyte instead of gel or liquid electrolytes. The electrolyte drying can be easily avoided with the help of a solid electrolyte.

What is a super capacitor?

The supercapacitor is a new type of component that stores energy through the interface double layer formed between the electrode and the electrolyte. Beryl is a professional capacitor manufacturer with 18 years of R&D experience in electrolytic capacitors, super capacitors, and so on.

Why should you choose Aishi solid polymer capacitors?

AiSHi solid polymer capacitors combine very high capacitance, extraordinary low ESR, excellent frequency stability and a non-ignite benign failure mode to make them a niche fit in space applications for both today and the future. AiSHi owns technologically advanced processes, machines and equipment for foil etching and foil forming.
