

# Profit analysis of hydrogen energy storage stack

## Overview

---

In this work, we evaluate energy storage with a regenerative hydrogen fuel cell (RHFC) using net energy analysis. Electrolytic hydrogen production (EHP), especially based on renewable energy, has attracted global attention due to its potential to reduce carbon dioxide emissions and produce clean .

In this work, we evaluate energy storage with a regenerative hydrogen fuel cell (RHFC) using net energy analysis. Electrolytic hydrogen production (EHP), especially based on renewable energy, has attracted global attention due to its potential to reduce carbon dioxide emissions and produce clean .

The inset in the bottom figure shows annual net operating profit for hydrogen ESS with access to energy markets (white) and access to hydrogen and energy markets (blue) for 1) H2 with storage above ground and fuel cell, 2) H2 with storage below ground and fuel cell, 3) H2 with storage above ground.

BUME uses material quotes, equipment capital costs, labor costs, power costs, and runtime. Welding (and associated steps) and roll bending use cost correlations. Aspen model is a black box, so it is difficult to say what the difference is between models. HDSAM1 v3.1 LH2tank installed capital cost.
