Forty applications were submitted for market premiums within the procedure for the second round of renewable electricity auctions in Serbia, Balkan Green Energy News learns.

Forty applications were submitted for market premiums within the procedure for the second round of renewable electricity auctions in Serbia, Balkan Green Energy News learns.

There are seven applications in the wind power segment and 33 for solar power Bids for an overall 1,171 MW were submitted, compared to a total quota of 424.8 MW. In the first auctions, bids were placed for 602.8 MW while the quota was 450 MW. The available quota for wind power projects is 300 MW.

IRENA (2017) has shown that as the cost of solar PV continues to come down, it is estimated that Serbia will have approximately 7 GW of cost-competitive solar potential by 2030. Currently this potential is not being utilised, as Serbia only has around 11 MW of installed solar capacity. Since.

Solar projects will be able to make bids for as high as €72/MWh (US\$76.2/MWh), slightly lower than the €79/MWh (US\$83.6/MWh) offered for wind, and applicants will have until 5 February 2025 to make proposals. This week's auction is the second phase in a three-stage programme to expand operating.

Now there are plans in place for UGT Renewables and Hyundai Engineering to provide a series of self-balanced utility-scale solar projects bringing reliable, renewable energy to every corner of Serbia. Delivering the utmost flexibility to the Serbian government, the Large-Scale Solar and Battery.

Serbia recently signed a contract to construct 1 GW of solar power plants along with 200 MW of battery storage. These projects will significantly alter the energy landscape, diversifying the energy mix of EPS, the national energy company. The plan is to add 3.5 GW of renewable capacity by 2030.

As of 2021, Serbia had a relatively low installed solar capacity of around 30 MW, primarily from small-scale rooftop solar installations. However, the potential for solar power in Serbia is significant, with an estimated capacity of up to 10 GW. With abundant sunshine and vast areas of unused land.
