

Serious overcapacity of energy storage

Overview

But the risks for power-system security of the converse problem — excessive energy storage — have been mostly overlooked. China plans to install up to 180 million kilowatts of pumped-storage.

Spyros Foteinis highlights the acknowledged problem that an insufficient capacity to store energy can result in generated renewable energy being wasted (Nature 632, 29; 2024). But the risks for power-system security of the converse problem — excessive energy storage — have been mostly overlooked.

ERCOT is the largest electricity market in the United States, covering Texas. It is a not-for-profit organization that manages the day-to-day operations of the power grid in Texas. ERCOT is responsible for ensuring the reliability and security of the power system, as well as promoting competition and efficiency in the electricity market. It does this by balancing supply and demand, managing transmission lines, and setting rules for how generators and consumers can interact with the grid.

factories churning out lithium-ion batteries faster than TikTok trends, while warehouses stockpile enough battery cells to power Mars colonies. Welcome to the paradoxical world of energy storage battery project overcapacity - where green ambitions crash into economic realities. The global energy.
