Local innovators are storing excess heat in sand silos at 600°C – basically creating giant thermal batteries using material cheaper than tô (that's sorghum porridge for you newbies). Think of lithium-ion batteries as camels crossing the Sahel – they carry energy through the dark desert of.

But here's the kicker – the Ouagadougou energy storage scale initiative is turning this challenge into Africa's most exciting power revolution since the invention of solar lanterns. Burkina Faso's capital faces a triple whammy: Enter the energy storage scale-up that's got engineers doing the.

That's exactly what the Ouagadougou Power Grid Storage Project aims to achieve. As West Africa's largest energy storage initiative, it's like giving Burkina Faso's capital a giant rechargeable battery – one that could power 200,000 homes during peak demand [6]. But how does a landlocked country.

Imagine trying to keep ice cream frozen during a heatwave – that's essentially what cities like Ouagadougou and Conakry face with their power grids. As temperatures soar and populations grow (Burkina Faso's urban population is exploding at 4.9% annually!), reliable energy storage becomes the.
