

# Site selection for the energy storage innovation center

## Overview

---

DOE has selected four sites—Idaho National Laboratory, Oak Ridge Reservation, Paducah Gaseous Diffusion Plant and Savannah River Site—to move forward with plans to invite private sector partners to develop cutting edge AI data center and energy generation projects. Which DOE sites are launching AI data center and energy generation projects?

DOE has selected four sites—Idaho National Laboratory, Oak Ridge Reservation, Paducah Gaseous Diffusion Plant and Savannah River Site—to move forward with plans to invite private sector partners to develop cutting edge AI data center and energy generation projects.

How does hydrogen energy storage affect site selection?

(4) Hydrogen energy storage is incorporated into the site selection consideration of wind-solar complementary power stations, and multiple factors such as resources, climate, economy and society are integrated, which significantly improves the scientific and reliability of site selection decisions.

Which is the best location for the brown area Power Station project?

In addition, the Brown area power station project is in the development stage, supported by government policies, and has considerable development potential in the future. Therefore, A6 is the best choice. A7 is near Cholun Horao, which is the least suitable location.

## Site selection for the energy storage innovation center
