

Small energy storage power station investment

Overview

Why are small and medium-sized pumped storage power stations important?

Small and medium-sized pumped storage power stations have unique development advantages, and the development and construction of small and medium-sized pumped storage power stations have important practical significance for optimizing the energy structure of Zhejiang Province.

How pumped storage power station can reduce the cost?

Therefore, on the basis of conventional small hydropower, the transformation into a small pumped storage power station or joint operation with pumped storage can reduce the cost, shorten the construction period, solve the problem of site selection, improve the power station output in the dry season, and increase the economic benefits.

Should pumped storage power stations be planned according to local conditions?

In 2021, the National Energy Administration made it clear in the Medium and Long Term Development Plan for Pumped Storage (2021-2035) that the construction of small and medium-sized pumped storage power stations should be planned according to local conditions in provinces with better resources.

What is the control scheme of a pumped storage power station?

The control scheme is one of the core technologies of small and medium-sized pumped storage power stations. The medium and small pumped storage power station can control energy storage and discharge by adjusting the difference of water level in the reservoir.

What is economic evaluation of pumped storage power stations?

The economic evaluation of small and medium-sized pumped storage power stations is an important means to evaluate the construction and operation

costs of power stations. Economic evaluation includes the evaluation of investment cost, operation cost and economic benefit of power station.

What is a pumped storage power station installation project?

In addition, the installation of power station units such as pump turbine, generator motor, inlet ball valve and auxiliary equipment is the core project of the entire installation project , which has a very important role and significance for the construction quality of the entire pumped storage power station.
