

# **South africa lithium iron phosphate energy storage project bidding**

## Overview

---

How much storage capacity does South Africa have?

Following the signing of the agreements with these additional two projects South Africa has secured a total of 360 MW/1440 MWh storage capacity under the country's first grid-scale bid window.

How long does it take to build a storage facility in South Africa?

Project construction is expected to take no more than 24 months and the storage capacity is expected to come online no later than November 2026. The projects will attract a total investment of R4.7 billion. South African Entity Participation of around 42.23%, and BEE ownership of 40% has been achieved across both projects.

How will Bess projects impact South Africa's Energy Security?

As South Africa continues to grapple with frequent blackouts and load shedding, these BESS projects will help mitigate risks and contribute to the country's energy security. The Gainfar Project will be connected to the Ngwedi substation, while the Boitekong Project will be connected to the Marang substation.

## South africa lithium iron phosphate energy storage project bidding

---

### Battery Energy Storage Station Bidding Information Announcement

The largest bidding project in June was the centralized procurement of a 3.5GWh lithium iron phosphate battery energy storage system by CEEC for the year. Additionally, the largest single ...
