

# **Successful bid price of nickel manganese cobalt battery project in Philippines 2026**

## Overview

---

The Philippines is one of the world's largest producers of nickel, a primary component in lithium-ion batteries used in electric vehicles, energy storage systems, and portable electronics. The country also has significant cobalt deposits, another critical material in battery technology.

The Philippines is one of the world's largest producers of nickel, a primary component in lithium-ion batteries used in electric vehicles, energy storage systems, and portable electronics. The country also has significant cobalt deposits, another critical material in battery technology.

With nickel and cobalt—two critical materials in battery production—abundant in the Philippines, EVAP asserts that the country is well-positioned to emerge as a key player in the global EV supply chain. EVAP President Edmund Araga emphasized that the Philippines offers distinct advantages for.

The Philippines Battery Metals Market is projected to reach a value of USD 2.5 billion by 2030, driven by increasing demand for electric vehicles (EVs) and energy storage systems (ESS). Lithium and nickel are the dominant metals in the Philippines, representing over 60% of the total battery metals.

Asian nickel cobalt manganese (NCM) battery cell prices fell to their lowest level for the first time in over three years in May, retreating significantly from the peak seen in 2022. A combination of lower critical battery raw material prices, supply glut, a sluggish demand and improving technology.

The global supply chain for nickel-manganese-cobalt (NMC) lithium-ion batteries faces multifaceted challenges influenced by geopolitical tensions, raw material sourcing risks, and regional policy shifts. Over 70% of cobalt production originates from the Democratic Republic of Congo (DRC), where.

South Korean battery materials maker Posco Future M has agreed to form a joint venture with a subsidiary of Philippine renewable energy company MC Group to produce raw materials for EV battery cathodes. The Philippines is said to have the world's second-largest nickel reserves after Indonesia.

Nickel Manganese Cobalt (NMC) Battery Market was valued at USD 42.3 billion in 2024 and is projected to reach USD 107 billion by 2032, growing at a CAGR of 12.3% during the forecast period. The Nickel Manganese Cobalt (NMC) Battery Market grows steadily, driven by rising electric vehicle adoption.
