

# **Successful bid price of on grid solar storage project in China 2025**

## Overview

---

The 25 GWh tender is widely seen as a turning point for the Chinese storage sector's shift from policy-driven growth to a more sustainable, market-oriented model. With system costs declining rapidly, LFP batteries are gaining traction across grid, generation, and end-user segments.

The 25 GWh tender is widely seen as a turning point for the Chinese storage sector's shift from policy-driven growth to a more sustainable, market-oriented model. With system costs declining rapidly, LFP batteries are gaining traction across grid, generation, and end-user segments.

China Energy Engineering Corporation (CEEC), a state-owned infrastructure giant, has launched one of China's largest energy storage procurements to date, tendering 25 GWh of lithium iron phosphate (LFP) battery systems on 3 June. The bid is being viewed as a watershed moment for the marketization.

On February 9, 2025, China's National Development and Reform Commission (NDRC) and the National Energy Administration (NEA) jointly issued the Notice on Deepening the Market-Oriented Reform of New Energy On-Grid Electricity Prices to Promote High-Quality Development of New Energy (hereafter.

Huasun Energy has been awarded the contract for the second batch of 2025 photovoltaic (PV) module procurement by State Grid Jibei Power Company, a subsidiary of State Grid Corporation of China. Under the agreement, Huasun will supply high-efficiency heterojunction (HJT) modules with ultra-high.

Ever wondered how China plans to power its green revolution?

Look no further than its 2025 energy storage projects, where policy tailwinds, tech breakthroughs, and gigawatt-scale deployments are rewriting the rules of the game. With over 29.9GWh of new projects already announced in early 2025 [1].

In a major policy shift toward electricity market liberalization, China has introduced contract-for-difference (CfD) auctions for renewable plants and removed the energy storage mandate, which has driven up to 75% of national

demand to date. S&P Global expects the move to reverberate through the.

In what is described as the largest energy storage procurement in China's history, Power Construction Corporation of China (PowerChina) is targeting an unprecedented cumulative storage capacity of 16 GWh. The bids were opened on December 4. The tender attracted 76 bidders, with quoted prices.

## Successful bid price of on grid solar storage project in China 2025
