

Successful bid price of sodium ion battery storage project in Guernsey 2030

Overview

How much does a sodium ion battery cost?

This is around 40-80 USD/kWh for a Na-ion cell compared to an average of 120 USD/kWh for a Li-ion cell. Sodium-ion batteries also offer advantages in terms of sustainability, compared to Li-ion batteries. The large abundance of sodium opens the door for more diverse sourcing.

Can sodium ion batteries compete with lead-acid batteries?

Production capacity forecasts for Na-ion batteries / SOURCE: (IRENA, forthcoming) For certain applications, Sodium-ion batteries have the potential to compete with existing lead-acid, lithium-ion batteries, such as NMC (nickel-manganese-cobalt) or LFP (lithium-iron phosphate).

What is a sodium ion battery?

Sodium-ion batteries (NaIBs) were initially developed at roughly the same time as lithium-ion batteries (LIBs) in the 1980s; however, the limitations of charge/discharge rate, cyclability, energy density, and stable voltage profiles made them historically less competitive than their lithium-based counterparts

What is sodium ion battery manufacturing?

Sodium-ion battery manufacturing relies mainly on soda ash as a sodium precursor, a compound that is far more abundant and more sustainable to extract and refine than lithium, making it lower cost, and less susceptible to resource availability concerns and price volatility.

What is the Edisonian approach to battery development?

7.1.1 Current status Conventional research strategies for the development of novel battery materials have relied extensively on an Edisonian (i.e., trial and error) approach, in which each step of the discovery value chain is sequentially dependent upon the successful completion of
