

# Summary of energy storage power station indicator formulas

## Overview

---

How can energy storage power stations be evaluated?

For each typical application scenario, evaluation indicators reflecting energy storage characteristics will be proposed to form an evaluation system that can comprehensively evaluate the operation effects of various functions of energy storage power stations in the actual operation of the power grid.

Which energy storage power station has the highest evaluation Value?

Calculation results of relative closeness. According to the evaluation values of the operational effectiveness of various energy storage power stations, station F has the highest evaluation value and station C has the lowest evaluation value.

How to evaluate energy storage power stations based on AHP - entropy weight method?

When using the TOPSIS model based on AHP - entropy weight method to evaluate energy storage power stations, the calculation steps are as follows:  
1) Construct weighted normalized decision matrixes.

What is the evaluation Indicator System?

The evaluation indicator system carries the evaluation information of energy storage power stations, comprehensively reflecting the actual operation of energy storage power stations from multiple aspects, and is the foundation of the evaluation.

What are the applications of grid side energy storage power stations?

Further research directions Due to the important application value of grid side energy storage power stations in power grid frequency regulation, voltage regulation, black start, accident emergency, and other aspects, attention needs to be paid to the different characteristics of energy storage when applied to the above different situations.

How do you rank energy storage power stations?

Rank the energy storage power stations based on their relative closeness degree  $C_i$ . The closer  $C_i$  is to 1, the closer it is to a positive ideal solution, and the higher it is in the ranking of advantages and disadvantages. 4.3. Processes for evaluating the operational effectiveness of energy storage power stations

## Summary of energy storage power station indicator formulas
