

The latest oil storage plan public document

Overview

What is an oil spill prevention plan?

The SPCC rule requires facilities to develop, maintain, and implement an oil spill prevention plan, called an SPCC Plan. These Plans help facilities prevent oil spill, as well as control a spill should one occur. If you have additional questions about the SPCC program, please call our Oil Information Center at (800) 424-9346 or TDD (800) 553-7672.

What are oil storage regulations?

Oil storage regulations are designed to protect the environment and public health by ensuring that oil stored in tanks meets specific safety standards. These regulations are intended to prevent spills and leaks from causing harm to people or the environment. The regulations cover both onshore and offshore operations.

What are the requirements for oil spill prevention and Countermeasure (SPCC)?

This regulation has two sets of requirements -- the Spill Prevention Control and Countermeasure (SPCC) plan rule (an oil spill prevention program), and the Facility Response Plan rule (an oil spill response program). You must comply with these requirements if you meet the applicability provisions set out in each rule.

Do you need an oil spill response plan?

All owners and operators of offshore facilities seaward of the coastline that handle, store, or transport oil must, with some exceptions, have an approved Oil Spill Response Plan (OSRP) before operations begin, and must operate their facilities in accordance with that OSRP.

What are the responsibilities of oil storage facilities?

In addition to outlining the technical requirements of oil storage facilities,

these regulations also detail the responsibilities of operators who store various petroleum products. These include properly maintaining equipment and reporting any incidents related to the storage or transportation of petroleum products.

What are the benefits of oil storage regulations?

Following oil storage regulations can have numerous benefits for big and small businesses. For one, properly storing oil products is essential in avoiding accidents that could be costly and put human lives at risk.
