The UL9540A:2025 standard sets a new benchmark for battery energy storage safety, with system-level fire testing, advanced thermal data, and global certification impact. In recent years, with the rapid development of the global energy storage industry, the installed capacity of lithium-ion Battery.

UL 9540A, Test Method for Evaluating Thermal Runaway Fire Propagation in Battery Energy Storage Systems, was developed to validate the safety of BESS installations as an alternative to meeting specific code criteria. The results from UL 9540A tests determine the fire and explosion protection.

UL 9540A is a testing procedure that evaluates and documents the fire performance of stationary ESS and was introduced as a compulsory requirement for all residential systems intended for installation in indoor locations as part of UL 9540 Ed. 2. The tests performed put the ESS through extreme.

Test Method for Evaluating Thermal Runaway Fire Propagation in Battery Energy Storage Systems. The primary measurement is heat release rate consumption calorimetry which is core to FTT's product range and external heaters are applied to the external of a battery and connected to a temperature Level Test.
