

# Toyota solid state battery made of

## Overview

---

Last September, Toyota announced plans for their improved lithium-ion batteries, as well as a “breakthrough” in solid-state battery technology. It’s notable, because the company had been resisting its transition to electric vehicles (EVs), focusing instead on hybrids and vehicles powered by.

Last September, Toyota announced plans for their improved lithium-ion batteries, as well as a “breakthrough” in solid-state battery technology. It’s notable, because the company had been resisting its transition to electric vehicles (EVs), focusing instead on hybrids and vehicles powered by.

According to a report published in Jan 2025, researchers, in collaboration with Toyota, found that using a new type of cathode material, copper nitride ( $\text{Cu}_3\text{N}$ ), for all-solid-state fluoride-ion batteries (FIBs), could increase the EV range by twofold.  $\text{Cu}_3\text{N}$  exhibits a high reversible capacity of.

The Japanese automaker says it has found a new material that will help commercialize the elusive, long-awaited solid state battery, but it's light on details. The Lexus RZ (Credit: Toyota) Toyota says it has found a technological breakthrough that will allow it to bring solid state batteries to.

Toyota has unveiled four next generation batteries including state-of-the-art advances with both liquid and solid electrolytes, and gave a preview of two further steps with solid electrolyte battery technology. Improved performance from liquid electrolyte batteries Batteries with liquid.

Idemitsu Kosan Co.,Ltd. (Idemitsu) and Toyota Motor Corporation (Toyota) announced today that they have entered into an agreement to work together in developing mass production technology of solid electrolytes, improving productivity and establishment a supply chain, to achieve the mass production.

Reports are breaking that Toyota has achieved a monumental manufacturing breakthrough in solid-state battery technology. The claims are so staggering they feel like they belong in a science fiction novel: A range of 1,200 km (750 miles) on a single charge. The ability to recharge from 10% to 80% in.
