

# **Us battery energy storage agreement**

## Overview

---

Madrid, July 23rd 2024: EDP Renováveis, S.A. (“EDPR”), through its fully owned subsidiary EDP Renewables North America LLC, has secured a 24-year Capacity Tolling Agreement with Salt River Project for a 200 MW (800 MWh) battery energy storage system in Arizona, US that is expected to reach commercial operations in 2025. Should a power purchase agreement include a battery energy storage system?

So, as you’re drafting the power purchase agreement, you make sure to pencil in a battery energy storage system into the budget and move on to more important details. This is a flaw that many attorneys make when contracting with renewable energy companies where a battery energy storage system is included in the terms.

Do energy storage tolling agreements restrict a developer's use of a battery?

As the energy stored in the battery belongs to the buyer, energy storage tolling agreements will often prohibit or restrict the developer’s use of the storage system for station service. The inclusion of this condition requires that the developer enters into a retail service contract for the system’s non-storage load.

How many GW of battery storage are there in the United States?

As of 2023, there is approximately 8.8 GW of operational utility-scale battery storage in the United States. The installation of utility-scale storage in the United States has primarily been concentrated in California and Texas due to supportive state policies and significant solar and wind capacity that the storage resources will support.

What is a battery energy storage system?

But the energy company managed to convince them by informing them about a piece of technology called a battery energy storage system. These battery energy storage systems have the ability to store renewable energy to be used at times when the source of renewable energy production is unavailable, i.e.,

the wind stops blowing.

Who owns the energy in an energy storage tolling agreement?

Therefore, the energy in the system belongs to the offtaker. As part of an energy storage tolling agreement, the seller is usually required to arrange for separate station service in order to not use the offtaker's electricity.

How to choose a battery energy storage unit?

First and foremost, the parties must decide upon the type of battery energy storage unit they will be utilizing. As previously discussed, the utilization of lithium-ion batteries is currently the popular form of battery storage. However, there are other types of BESS both in current operations and that are being developed.
